Health4Me

The new app from UnitedHealthcare
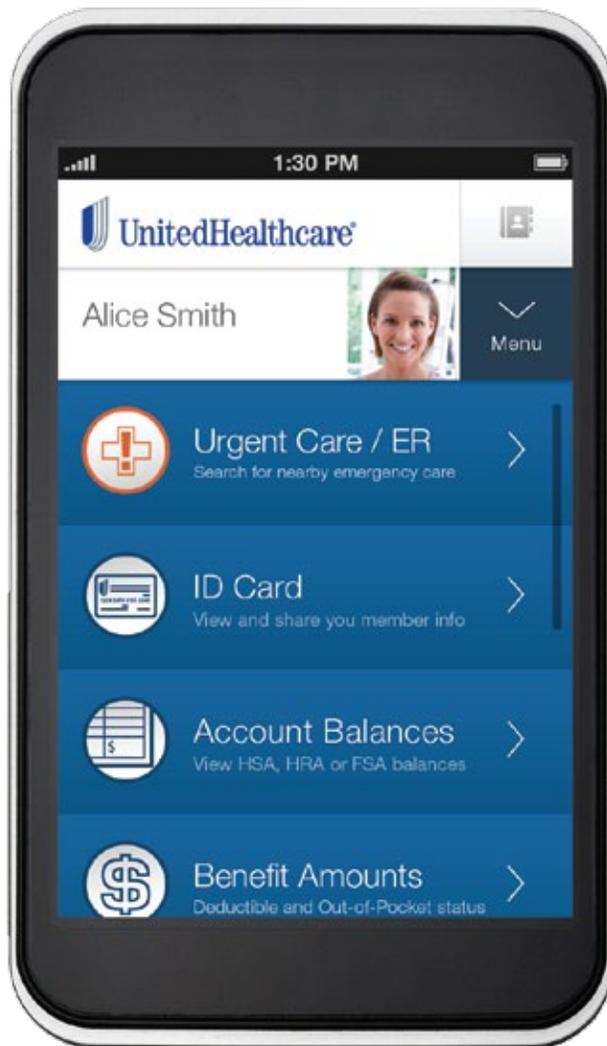

Available on the
App Store

Android available in
Google play

UnitedHealthcare®

Your employees' health care resources, in their hands.

UnitedHealthcare Health4Me™ is designed to make managing health care a lot simpler. Your employees can easily access information for each family member, find doctors, personalize the interface with their photos and even talk to someone directly if they have questions.
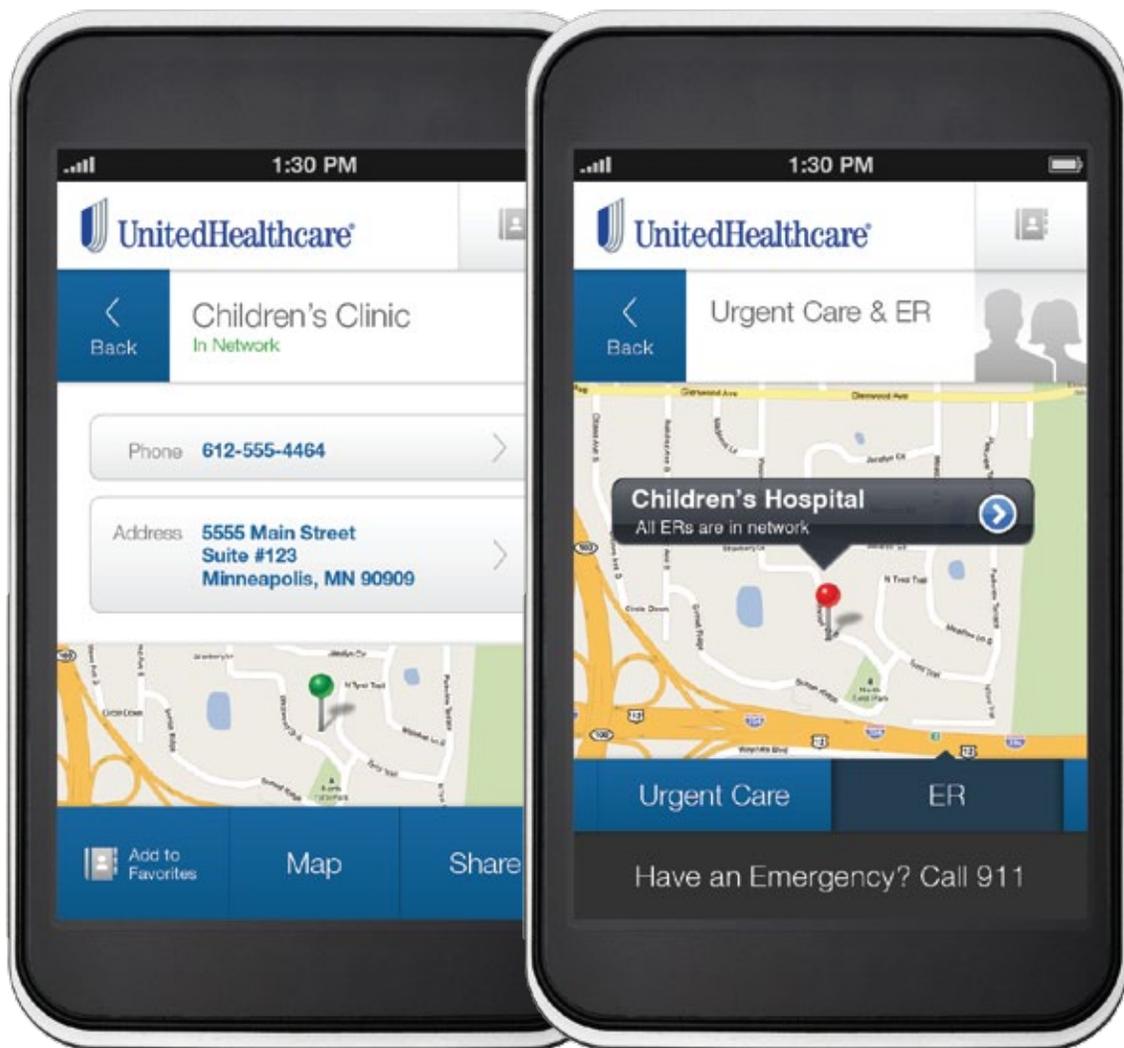

Information at your employees' fingertips.

Giving your employees the ability to access health plan information on their phones means they can conveniently view and share their family's health plan ID cards, check the balance of a health financial account or even look up the status of a claim.
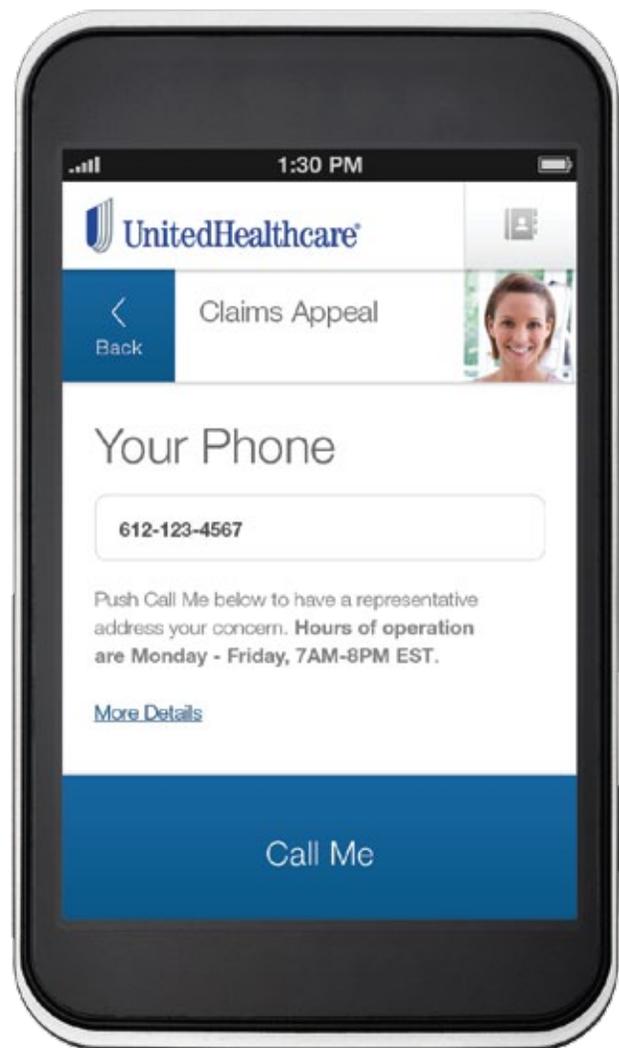

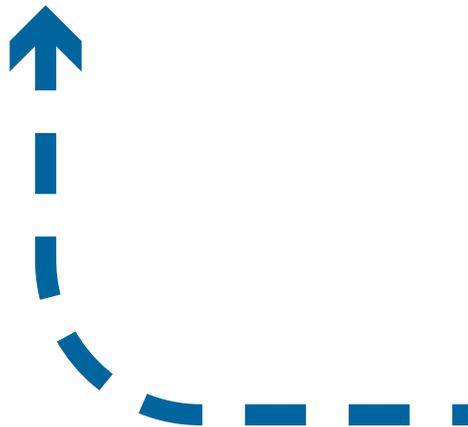

Your roadmap to health.

Having an app that takes advantage of a smartphone's GPS allows users to find the doctor or facility they need, even in an emergency. Anytime. Anywhere. Health4Me lets your employees search by what's closest to their current location, or by the type of care they seek.

A personal touch.

And while the control that Health4Me offers is nice, know that the app can connect your workforce with helpful, professional people when they need it. Health4Me asks the user what they need help with, then has a Health Advisor contact them with information.
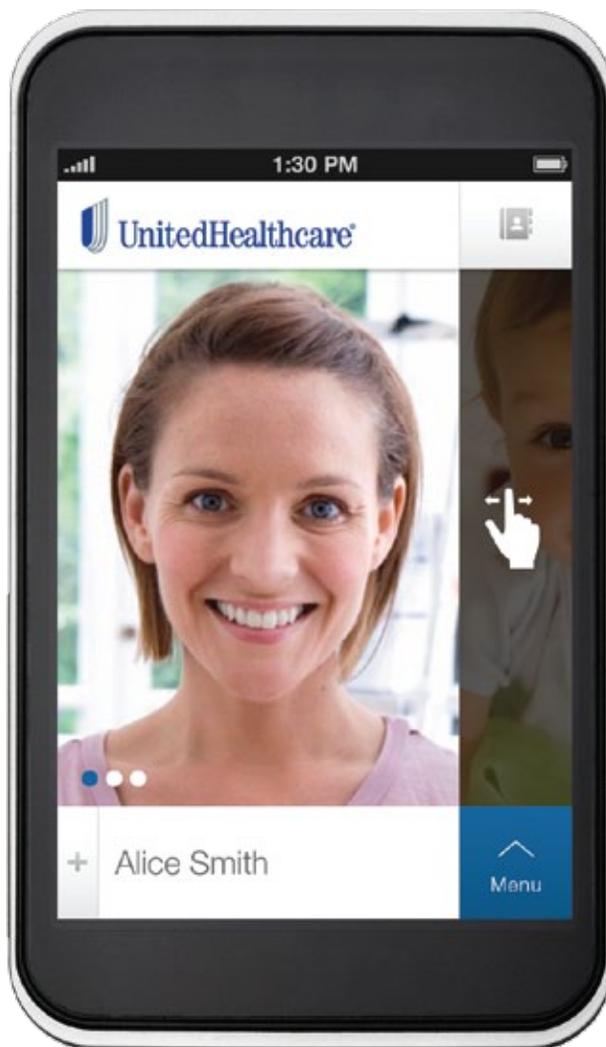

Built to grow.

Health4Me is designed to simplify and streamline your employees' access to their health care resources in a secure and convenient way. It's a platform that is built to grow and may be an ally for helping them lead healthier lives today, and for years to come.
